SOFTWARE QA ENGINEER

Versatile quality advocate with a strong record of ensuring high-fidelity, on-time, and high-quality software releases. As a key contributor to cross-functional teams across diverse projects, I take ownership of quality and bring expertise in designing, implementing and executing test strategies that align closely with business objectives and technical requirements.

CORE SKILLS

- Functional, integration, **regression** testing
- **Automated** test development - **UI and API**
- Test **planning** and strategy, edge casing
- Problem-solving, **unblocking**
- Cross-team **collaboration** and communication
- **Discover**, triage and document **defects**
- Agile / **SDLC** – Scrum/Kanban
- **Identify** project design **issues early**
- Rapid **requirements** interpretation
- Develop deep **product knowledge**, use cases

TECHNICAL SKILLS

Java, Selenium WebDriver, RestAssured, TestNG, Python, Pytest, Javascript, SQL, AWS, Docker, Git, Postman, Jenkins, Gitlab, Jira, WordPress

SIGNATURE VALUE

- Create and execute test plan on major TikTok Shop projects to modularize seller onboarding moderation, enabling time to integrate third-party verification vendors from 3 weeks to 3 days.
- Owned quality on numerous projects successfully improving CSAT metrics in TikTok Shop aftersales including platform-subsidized returnless refunds.
- Create, integrate and maintain new regression test suites and reporting for multiple services on TikTok Shop.
- Lead QA on new ‘Linkout’ product offering including UI, API, tooling, reporting and customer integration resulting in ability to meet increased customer and user demands at All Star.
- Integrate Selenium UI test automation with BrowserStack to parallel test on mobile device matrix, increasing mobile test coverage 100% while reducing time to execute regression testing.
- Lead QA on all conversion rate optimization feature development and related A/B testing, increasing conversion rate over 50%.
- Migrate backlog of over 150 manual test cases into new Selenium UI automation test framework, removing massive QA bottleneck and decreasing time to market new features and optimizations.

RECENT EXPERIENCE

TikTok (ByteDance) via Deloitte / Millennium Software **Oct 2022 – Jan 2025**
Lead QA Engineer | Project Delivery Specialist II

- Collaborate with US and international teams to ensure quality of dozens of new feature and enhancement rollouts for TikTok Shop and seller onboarding funnel by creating test plans, designing and executing automated and manual test strategies where none previously existed.
- Created and maintained automated Python RPC, HTTP and event-driven API framework and test cases for regression testing various endpoints and queues, decreasing time to iterate over existing features with high confidence in quality. Integrated test suites into CI/CD pipelines.

- Performed manual QA testing for major eCommerce initiative to integrate TikTok Shop into third-party platforms Salesforce, Shopify and Woo Commerce increasing customer efficiency and satisfaction.
- Provided automated test creation, manual testing and joint debugging support to offshore teams new features within US data center while maintaining strict US data privacy protocols.
- Authored tool and process documentation; trained and mentored newly on-boarded team members.
- Developed dashboards for monitoring success/fail rate of nightly execution of automated test cases and tracking of Jira issues resulting in reduction of test flakiness and issue time to complete.

All Star Directories (All Star) **Oct 2012 – Jun 2022**
Senior QA Engineer, Lead QA Engineer, QA Engineer

- Led QA efforts in all stages of Agile SDLC from design to post-deployment, ensuring successful delivery of product initiatives across various functional areas.
- Sustained high quality metrics throughout the product's evolution, supporting new product offerings, conversion optimizations, compliance updates and iterative functional and design enhancements over a 10-year period.
- Developed and executed on comprehensive test plans for each assigned project. This included design of automated and manual testing strategies, conditions and cases as well as configuration of test environments and creation or obtainment of test data.
- Built out new Selenium WebDriver/Java-based automation framework and converted existing manual regression test cases to automated tests for CI/CD integration in Jenkins then Gitlab Auto DevOps.
- Integrated existing automation with BrowserStack to facilitate testing across mobile device matrix.
- Lead QA resource on project to develop new public API for sharing of inventory with partners vastly improving the partner integration and onboarding process.
- Created automation test suite to test new API against DB data using custom developed SQL queries.
- Provided optimization suggestions and certification of new partners' integrations of newly developed API by working closely with partners' dev teams.
- Supervised and delegated all QA activities throughout each sprint between QA team members ensuring timely delivery and quality of deliverables.
- Configured and ran SiteSpect A/B test campaigns, metrics and triggers for new features and optimizations leading to significant gains in conversion rates and insight.

All Star Directories | Production Engineer **Sept 2008 – Oct 2012**

- Created and maintained code solutions developed in PHP and Java from customer technical requirements to format and post platform-hosted form data to customer APIs (CRM) in real time.
- All Star Directories began work to migrate from their legacy PHP platform to a new Java-based platform architected in-house in 2009. I was tapped to provide assistance in specification gathering and to rewrite and test 80+ PHP classes into their Java equivalents.

EDUCATION & CERTIFICATIONS

San Francisco State University, 1994

Oracle Certified Java Associate, **ISTQB** Certified Tester Foundation Level, **AWS** Certified Cloud Practitioner
